

Stargard

The original PVC sleeved handrail offers an unbeatable blend of benefits

- * **Comfortable to grip**
42 mm or 50 mm diameter handrail
- * **“Not cold to the touch” and UV stable**
4 mm (4,000 microns) thick PVC sleeving and the colour is consistent throughout the thickness of the PVC.
Stargard is generally 4 - 5 degrees Centigrade warmer than powder coated steel of the same size and colour (Important at low ambient temperatures). Stargard can also incorporate LED INSERT lighting see Illumine data sheet
- * **Robust**
Galvanised tubular steel core.
(generally 3-4 metres between visible joints)
- * **The PVC sleeving is applied after fabrication** (all welds are ground smooth before sleeving).
It resists knocks and bumps, and does not “chip”.
- * **A range of colours**
Black (RAL 9005), White (RAL 9001), Blue (RAL 5010), Yellow (RAL 1021), are held in stock. Other RAL colours are available to order (minimum quantities apply)
- * **Baluster Options:**
Balusters can be PVC sleeved, powder coated, galvanised steel, or stainless steel. **Stargard** can also be fitted to **Glassrail** structural glass

Glazed **Stargard** with “double” handrail and glass infill panels

Stargard with clear glass infill panels

Stargard with stainless steel “Running rails”

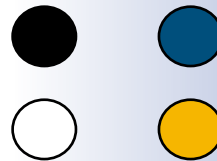

Stargard with perforated sheet infill panels

February 2017

4 mm (4,000 microns) thick PVC over galvanised steel tube

Stargard
Standard colours

Typical **Stargard** ramp balustrade

Stargard external balustrade
