

Stronghold

Stainless steel balustrade system

July 2015

The Product

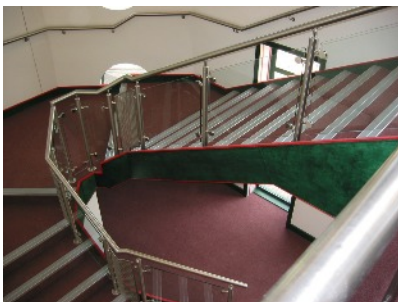

Stronghold is a balustrade and handrail system which is designed for the application where the more “component based” systems would feature too many visible joints.

Stainless steel is grade 304 or 316 which is suitable for either interior or exterior applications.

The surface finish can be either fine satin or bright polished

Handrail is either 42 mm or 48 mm diameter, and all “changes in direction” of the handrail are welded, dressed, ground smooth and then finally polished. We aim to have only one visible joint per flight of stairs.

Various infills are available:
Glass, perforated sheet, mesh, wire or “running rails.”
