

Strading *Hygienic*

handrail system

Typical Applications

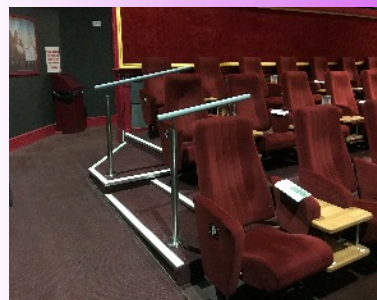

Strading *Hygienic* is a tubular stainless steel handrail system either 48 mm or 42 mm diameter which is coated with an anti-microbial coating.

The coating takes positive action by providing a passive barrier against bacteria and viruses, by inhibiting their growth thereby reducing the risk of spreading the germs.

Handrails are naturally touched by many people during a day making them continuously available to transmit a range of viruses.

Strading *Hygienic* handrail virtually removes this risk completely. The special coating gives a built-in, continuous protection 24 hrs a day, 7 days a week. As a result there is no need to apply any subsequent “top up” protection.

The handrail is available in a range of colours and can be fitted to any of SG System’s other balustrade products.
