BPI STRONGHOLD

BPI Stronghold is designed for the application where a component-based system would feature too many visible joints.

All “changes in direction” of the Stronghold handrail are welded, dressed, ground smooth and then finally polished with either a bright or satin finish. We aim to have only one visible joint per flight of stairs.

This system is a high-quality tubular stainless steel handrail utilising fittings from either grade 304 stainless steel (interior applications) or grade 316 stainless steel (exterior).

Compatible with a range of modern filling solutions including:

- Toughened Glass Panels
- Perforated Sheet Metal
- Stainless Steel Wire
- Woven Metal
- Running Rails
- Custom Designs

BPI Stronghold is available in Ø42mm or Ø48mm.

Minimal joints in comparison to a component based system

Handrail available in a range of finishes, including **powder coating, satin and bright**

Available with a range of **contemporary panel infills**

Compatible with **BPI Illumine - LED integrated handrails**
